Add Water, Stir, and Instantly Make Snow!

Tons of Uses-Parties, Crafts, Educational Projects!
1 Tablespoon Makes 1 Quart of Snow, 3.6 oz. Jar
Makes Up to 345 oz.!

Stir to Make Glisten and Shine!
Excellent Value-Reuse Over and Over!
Safe and Nontoxic

What is Super Snow?

Super snow is a cross-linked polymer that rapidly absorbs water by using the process of osmosis. When water comes in contact with the polymer, it moves from outside the polymer to the inside and causes it to grow and expand. Polymer chains are elastic and will continue to grow to a certain point. Super Snow expands to 100 times its original size! Just one 100 gram jar makes over 245 ounces of snow!

There are many different and diverse uses for Super Snow. It is used by teachers to demonstrate absorption, freezing and thawing, and evaporation. Super Snow has been used in indoor snowboarding parks, and on the sets of film studios and greeting card companies. Super Snow is great for parties, projects and helps plants grow!

Shipping Starts September 10, 2004!

Item#: SO-0065

Case Pack: 24

Unit Wholesale: \$4.00

Unit Retail: \$7.99

100 Grams in 4 oz. Reusable Jar
